| Exploded View of Wash | ash System | Standard Dry Air Flow When the control advances to the "dry" portion of | Power Dry Air Flow The Power Dry configuration is the same as the | |
|---|---|---|--|--|
| Nozzle | Drain Hose | the cycle, a linear actuator retracts a valve, which opens a vent path through the console into the kitchen. This venting method eliminates discharging heated moisture into the motor compartment. The heated, moist air leaving the dishwasher through the console vent causes drier air to be drawn into the unit by way of intake | Standard except it has a cross flow blower located in the air discharge path. The blower assists the heating element in producing power to drive the moist air out of the dishwasher. | Always disconnect replacing compone |
| Funnel | | | | Symptom |
| Nut | | water on the dishes is evaporated into drier air and the venting process continues. The heating element is turned ON and OFF during the entire drying cycle. | | Dishwasher will not opera turned on (wait at least 90 |
| | Spray Arm Support | Detergent and Rinse Aid Dispenser | | |
| 7-6 | Glass Trap Heating | The detergent and rinse aid dispenser is a one piece component consisting of a molded detergent cup and a built-in rinse aid dispenser. | To replace dispenser: shut off electricity to dishwasher, remove outer door nanel assembly | Motor hums but will not s |
| | Filter | The detergent cup has a spring loaded cover and the rinse aid dispenser has a removable | e actuator, | Motor trips out on interna overload protector. |

| Circulation Motor Assembly | Drain Motor | released can be adjusted by turning the arrow indicator from one, being the least amount, to four, being the greatest amount. | | Detergent cover will not la open. |
| | Connector Hose and Clamps Sump | | | Dishwasher will not pump |
| Water Inlet Tube | Sump Retainers (4) | | | |
| Incoming Water Supply | Supply | The door seal is pressed into the tub channel for an interference fit. Center the gasket (marked on back) at the tub top center and press in place | without stretching or bunching. The gasket takes a short turn at the bottom of the tub channel before ending at the channel end wall. | Dishwasher will not fill w |
| | attached by a worm gear clamp to the discharge of the drain pump. The drain is then routed up the | | Gasket Cross Section | |
| | side of the dishwasher and attached to the side of the tub. This drain loop insures that an air pocket cannot form near the drain pump and cause the pump to air lock. The drain loop on the side of the tub must be kept in place after servicing. The main pump can easily be removed by | | | Timer does not advance. |
| | disconnecting the upper spray arm supply tube hose, the drain pump connector hose, the wiring harness connections made at the circulation motor, the water heat thermostats located on the | | Short Turn | Dishwasher water siphon: |
| hose. The drain check valve is located at the bottom c entrance to the drain pump. The drain hose is retainers | bottom of the pump and rotating the four sump retainers toward the middle of the sump. | Product Specifications Electrical Rating | | Detergent left in dispense |
| 900 Watt Heater Refer to the cycle chart on the reverse side to Voltage determine when the heater is on during the wash with the cycle. The heater cycles ON and OFF for brief periods during the drying cycle. | Voltage checks of the heater should be made with the timer set in the main wash. | max. Motor (Amps) | Pressure (PSI) min./max | |

Trouble Shooting Tips

A WARNING Personal Injury Hazard It the dishwasher from the electrical power source before adjusting or ients.

| ents. | | |
|-------------------------|--|---|
| | Check the Following | Remedy |
| ate when) seconds). | Fuse (blown or tripped). 120 VAC supply wiring connection | Replace fuse or reset breaker. Repair or replace wire fasteners at distance for the fasteners at |
| | Timer (contacts open or defective) Motor (inoperative). | Replace timer. Replace motor/impeller assembly. |
| | | |
| | door switch. 7. Selector switch (open contacts). | 7. Replace selector switch. |
| start or run. | Motor (bad bearings). Motor stuck due to prolonged non-use. | Replace motor assembly. Rotate motor impeller. |
| al thermal | Improper voltage. Motor windings shorted. Glass or foreign items in pump. | Check voltage. Replace motor/impeller assembly. Clean and clear blockage. |
| not heat. | Heater element (open). Timer defective. Wiring or terminal defective. | Replace heater element. Replace timer. Repair or replace. |
| atch or | 1. Latch mechanism defective. | 1. Replace dispenser. |
| | Irmer contact cerective. Wring or terminal defective. Broken spring(s). Defective actuator. | replace timer. Repair or replace. Replace dispenser. Replace dispenser. |
| pout. | Drain restricted. Timer contact defective. Defective drain pump. Air lock in drain hose. | Clear restrictions. Replace timer. Replace pump. Make sure hose is attached in proper position on side of tub |
| | Blocked impeller. Open windings. | Check for blockage, clear. Replace pump assembly. |
| vith water. | Water supply turned off. Defective water inlet fill valve. Check fill valve screen for obstructions | Turn water supply on. Replace water inlet fill valve. Disassemble and clean screen. |
| | Defective float switch. Timer contact defective. Wiring defective. Wiring the stuck in "UP" position. | 4. Repair or replace. 5. Replace timer. 6. Repair or replace. 7. Clean float. |
| | Timer motor (stalled or open.) Check timer for power to timer motor. Timer shaft binding to or knob Timer shaft binding to or knob | Replace timer. Repair or replace timer. Repair or adjust. |
| | 4. TempBoost thermostat defective. | Replace or adjust position of thermostat. |
| is out. | Drain hose (high) loop too low. Drain line connected to a floor drain not vented. Drain hose not connected to side | Repair to proper height. Install air gap at counter top. Reattach drain hose. |
| er. | 1. Detergent allowed to stand too long | 1. Instruct customer/user. |
| | in dispenser. Dispenser wet when a added. | 2. Instruct customer/user. |
| | Detergent cover held closed or blocked by large dishes. Improper incoming water temperature to properly dissolve detergent. See "Detergent cover will not open." | Instruct customer/user on proper loading of dishes. Incoming water temperature of 120°F Incoming water to properly dissolve dishwashing detergents. |
